

MAKING SOURED CORN

DURING PRE-BAITING, USING SOURED GRAINS REDUCES THE RISK OF CATCHING NON-TARGET SPECIES. SOURED CORN MAY BE Poured ON THE GROUND RATHER THAN IN A FEEDER. FOR SOURED CORN TO USE DURING PRE-BAITING, FOLLOW THIS SIMPLE RECIPE:

PURCHASE A 50-POUND BAG OF WHOLE KERNEL CORN FROM LOCAL FEED STORE

FILL A 5-GALLON BUCKET HALF FULL OF CORN

FILL THE BUCKET WITH WATER SO THAT IT IS 2-3 INCHES ABOVE THE CORN

STIR WELL, PUT A LID ON THE BUCKET, AND ALLOW IT TO SIT IN THE SUN FOR 3-5 DAYS

CHECK DAILY AND ADD WATER AS NEEDED TO KEEP CORN SUBMERGED TO PREVENT MOLDING OR SPROUTING.
